

Activity 1

AI Tipping Point

Watch the video AI Tipping Point: <https://www.youtube.com/watch?v=1cKE12LK4Eo>

- Submit 3 key takeaways according to you
- Submit any aspect that you agree & did not agree with

Submission format: PDF

Takeaways from the video are:

1. Artificial Intelligence in the future can become so strong that it can replace jobs such as CEO which is a threat to all other easily replaceable jobs.
2. Without proper regulations for AI, it is hard to allow access to use, which might get harder for the government or authorities.
3. AI is evolving rapidly, as said by James Cameron and predicted by Joe Biden. The development of LLMs is a major tipping point of AI, this is a breakthrough in the domain.

The aspect that I agree with is that without proper regulation, AI can be a problem. With proper regulations, AI has the potential to benefit society such as using AI to improve health care and education.

The aspect that I disagree with is that AI is close to reaching human-level intelligence because humans are capable of many things that AI is still not aware of or can be for example Gravity and movements, though there are multiple robots in the world currently, no robot can match the thinking of human-like and understand the kinematics of the world as humans do.
